International Energy Outlook Springer Nature

Remarkable change is the new reality of International Business. The accelerating cross-border flow of products, services, capital, ideas, technology and people are driving businesses--large and small--to internationalise. International Business 1st Australasian edition: the New Realities is a rigorous resource which motivates and prepares future managers to operate in multi-national settings, by delivering a teaching system that works. Based on the authors' collective teaching and working experience--as well as discussions with practitioners, students, and faculty staff--this is a complete teaching and learning system where cases, exercises and management skill builders are seamlessly integrated and matched to the topics in each chapter. Case studies from a wide variety of markets relevant to Australasian businesses, including ASEAN countries (e.g. Singapore, Malaysia, Indonesia) as well as China, India, Japan, South Korea, Pakistan, Europe and the Middle East, provide a real-world perspective to theories and examine the latest trends in international business. For undergraduate students majoring in international business or post-graduate courses in international business.

OECD Skills Outlook 2017 Skills and Global Value Chains Pearson Higher Education AU "The ongoing COVID-19 pandemic marks the most significant, singular global disruption since World War II, with health, economic, political, and security implications that will ripple for years to come." -Global Trends 2040 (2021) Global Trends 2040-A More Contested World (2021), released by the US National Intelligence Council, is the latest report in its series of reports starting in 1997 about megatrends and the world's future. This report, strongly influenced by the COVID-19 pandemic, paints a bleak picture of the future and describes a contested, fragmented and turbulent world. It specifically discusses the four main trends that will shape tomorrow's world: - Demographics-by 2040, 1.4 billion people will be added mostly in Africa and South Asia. - Economics-increased government debt and concentrated economic power will escalate problems for the poor and middleclass. - Climate-a hotter world will increase water, food, and health insecurity. - Technology-the emergence of new technologies could both solve and cause problems for human life. Students of trends, policymakers, entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades, will find this report, with colored graphs, essential reading.

The Future of Multilateralism Rowman & Littlefield

A balanced examination of global energy issues. Energy sustainability and climate change are two of the greatest challenges facing humankind. Unraveling these complex and interconnected issues demands careful and objective assessment. Fact and Fiction in Global Energy Policy aims to change the prevailing discourse by examining fifteen core energy questions from a variety of perspectives, demonstrating how, for each of them, no clear-cut answer exists. Is industry the chief energy villain? Can we sustainably feed and fuel the planet at the same time? Is nuclear energy worth the risk? Should geoengineering be outlawed? Touching on pollution, climate mitigation and adaptation, energy efficiency, government intervention, and energy security, the authors explore interrelated concepts of law, philosophy, ethics, technology, economics, psychology, sociology, and public policy. This book offers a much-needed critical appraisal of the central energy technology and policy dilemmas of our time and the impact of these on multiple stakeholders.

Cars in Europe: Supply Chains and Spillovers during COVID-19 Times

Hearings Cosimo Reports

The global upswing in economic activity is strengthening. Global growth, which in 2016 was the weakest since the global financial crisis at 3.2 percent, is projected to rise to 3.6 percent in 2017

and to 3.7 percent in 2018. The growth forecasts for both 2017 and 2018 are 0.1 percentage point stronger compared with projections earlier this year. Broad-based upward revisions in the euro area, Japan, emerging Asia, emerging Europe, and Russia—where growth outcomes in the first half of 2017 were better than expected—more than offset downward revisions for the United States and the United Kingdom. But the recovery is not complete: while the baseline outlook is strengthening, growth remains weak in many countries, and inflation is below target in most advanced economies. Commodity exporters, especially of fuel, are particularly hard hit as their adjustment to a sharp step down in foreign earnings continues. And while short-term risks are broadly balanced, medium-term risks are still tilted to the downside. The welcome cyclical pickup in global activity thus provides an ideal window of opportunity to tackle the key policy challenges—namely to boost potential output while ensuring its benefits are broadly shared, and to build resilience against downside risks. A renewed multilateral effort is also needed to tackle the common challenges of an integrated global economy.

China's Demography and its Implications McGraw-Hill Companies

New Economic Thinking and Real Estate offers a modern and distinctive approach to forecasting and understanding property markets. With this book, students will develop an intuitive ability to interpret economic indicators and acquire the confidence to assess property markets. The book is divided into three parts: Part A: Resource choices - deals with microeconomics; Part B: Financial Systems - seeks to make sense of the macroeconomic scene and Part C: Measuring and Forecasting.

Regional Economic Outlook, October 2017, Middle East and Central Asia World Bank Publications

During the last two decades the study of European foreign policy has experienced remarkable growth, presumably reflecting a more significant international role of the European Union. The Union has significantly expanded its policy portfolio and though empty symbolic politics still exists, the Union's international relations have become more substantial and its foreign policy more focused. European foreign policy has become a dynamic policy area, being adapted to changing challenges and environments, such as the Arab Spring, new emerging economies/powers; the crisis of multilateralism and much more. The SAGE Handbook of European Foreign Policy, Two-Volume set, is a major reference work for Foreign Policy Programmes around the world. The Handbook is designed to be accessible to graduate and postgraduate students in a wide variety of disciplines across the humanities and social sciences. Both volumes are structured to address areas of critical concern to scholars at the cutting edge of all major dimensions of foreign policy. The volumes are composed of original chapters written specifically to the following themes: · Research traditions and historical experience · Theoretical perspectives · EU actors · State actors · Societal actors · The politics of European foreign policy · Bilateral relations · Relations with multilateral institutions · Individual policies · Transnational challenges The Handbook will be an essential reference for both advanced students and scholars.

Global Monsoon System, The: Research And Forecast (2nd Edition) International Monetary Fund

"Truly the best of the best A standard reference work, greatly improved by its expansion . . . bigger better and more comprehensive, " raved Choice in its review and award citation for the 1999 edition of this annual reference. The USITO 2000 provides an industry-by-industry overview of the U.S. economy. Detailed examinations of more than 220 industries in 51 sectors offer a comprehensive understanding of the economy and its effects on world trade. Also featured in this preferred reference for corporate managers, strategic planners, and researchers: -- Unique statistical overview of the U.S. economy -- Over 650 easy-to-read charts and tables -- Graphical snapshots of industry and trade trends -- Forecasts for the next five years -- Unparalleled combination of information from the U.S. government and McGraw-Hill/Standard & Poor's *Journal of Transportation and Statistics* JHU Press

EVERYONE'S GUIDE - FORECAST & SOLUTION introduces new, easy-to-use statistical methods so that the reader can answer the questions: How long will nuclear peace tend to continue? And, what

can be done to extend it further? Dietrich Fischer, a past MacArthur Fellow at Princeton, was emphatic: "This is an original & highly readable contribution to the most important issue facing humanity today - surviving the nuclear threat. Jeanes combines lucid common sense with mathematical rigor in this landmark work. Anyone with an interest in having a future should read this work." Similarly, another distinguished scholar & author in the field declared, "It was more than interesting: it was completely fascinating." The general literate reader can assess when a nuclear use (small or otherwise) would tend to occur at probabilities from 1% to 99.9%, & what precisely can be done to forestall such use. Jeanes debunks deterrence theory, illustrates consequences of proliferation, & provides a unified explanation for warfare, conventional & nuclear. A comprehensive work - ethical, political, historical, analytical. 100+ Graphs & Tables, 1,500+ footnotes. TOLL-FREE, 24 hours-a-day, credit card line (800) 448-3330; Publisher: (800) 446-0467.

EU Policies in a Global Perspective John Wiley & Sons

Provides a forum for the latest developments in transportation information and data, theory, concepts, and methods of analysis relevant to all aspects of the transportation system. Publishes original research on the use of information to improve public and private decisionmaking for transportation.

World Economic Outlook, October 2017 SAGE

Energy Efficiency in Air Transportation explores the relationship between air transportation and energy use, starting with an analysis of air transport energy sources and their potential development. The book examines how different elements of the air transport system make use of energy, with an analysis of various methods for optimizing energy consumption. The book covers the consequences of energy use in terms of economics, environmental impact and sustainable development, with a review of the existing and proposed regulatory measures addressing those factors. Aeronautical and air transport engineers interested in aerial vehicle systems design, as well as public administrators and regulators concerned with energy efficiency or environmental issues in air transport, will benefit greatly from this comprehensive reference, which captures necessary background information along with the newest developments in the field. Examines new developments in energy efficiency in the air transport field Includes exergy analyses of aerial vehicles and systems Shows the environmental impact from fuel use including local air quality, consumption of non-renewable materials and contribution to climate change Discusses the CO2 emissions certification required by ICAO for new aircraft models

The OECD Skills Outlook 2017 shows how countries can make the most of global value chains, socially and economically, by investing in the skills of their populations.

Regional Economic Outlook, Asia and Pacific, April 2024 Ike Jeanes

Published to coincide with the Fourth United Nations Environmental Assembly, UN Environment's sixth Global Environment Outlook calls on decision makers to take bold and urgent action to address pressing environmental issues in order to protect the planet and human health. By bringing together hundreds of scientists, peer reviewers and collaborating institutions and partners, the GEO reports build on sound scientific knowledge to provide governments, local authorities, businesses and individual citizens with the information needed to guide societies to a truly sustainable world by 2050. GEO-6 outlines the current state of the environment, illustrates possible future environmental trends and analyses the effectiveness of policies. This flagship report shows how governments can put us on the path to a truly sustainable future - emphasising that urgent and inclusive action is needed to achieve a healthy planet with healthy people. This title is also available as Open Access on Cambridge Core.

Energy Efficiency in Air Transportation Springer Nature

Growth in Asia and the Pacific outperformed expectations in late 2023, reaching 5.0 percent for the year. Inflation has continued to decline, albeit at varying speeds: some economies are still seeing sustained price pressures, while others are facing deflationary risks. In 2024, growth is projected to slow modestly to 4.5 percent. Near-term risks are now broadly balanced, as global disinflation and the prospect of monetary easing have increased the likelihood of a soft landing. Spillovers from a deeper property sector correction in China remain an important risk, however, while geoeconomic fragmentation clouds medium-term prospects. Given the diverse inflation landscape, central bank policies need to calibrate policies carefully to domestic needs. Fiscal consolidation should accelerate to contain debt burdens and debt service cost, in order to preserve budgetary space for addressing structural challenges, including population aging and climate change.

[Situation and Outlook Series](#) Springer Nature

The projections in the U.S. Energy Information Administration's (EIA's) Annual Energy Outlook 2013 (AEO2013) focus on the factors that shape the U.S. energy system over the long term. Under the assumption that current laws and regulations remain unchanged throughout the projections, the AEO2013 Reference case provides the basis for examination and discussion of energy production, consumption, technology, and market trends and the direction they may take in the future. It also serves as a starting point for analysis of potential changes in energy policies.

[The Geopolitics of the Global Energy Transition](#) International Monetary Fund

Recent decades have seen a rise in the significance of governance layers beyond the nation state and even Europe. Nonetheless, few efforts have been made thus far to systematically examine the EU's interaction with global policy regimes. This book maps the relative importance of EU policies in the multi-level global governance system, in comparison with national and global activities. It provides a unique comparative analysis of the EU's capacity for projecting its policies outward. Focusing on trade policy, agriculture, food safety, competition, social rights, environmental policy, transport, migration, nuclear non-proliferation, or financial regulation, each chapter contributes to a better understanding of the EU's role in shaping global policies, the mechanisms it uses and the conditions leading to success or failure. The contributors' comparative research highlights that policy export is a demanding phenomenon that faces severe limitations and frequently comes with drawbacks. Still, EU policy export played a key role in shaping the rules of the global trade regime and influenced global policy outcomes – at least to a minor extent or in technical aspects – in the majority of the covered policy areas. Overall however, this book reveals that the EU not only aims to export its policies, but interacts with its global environment in a number of distinct ways, including policy import and policy protection, to shield it from global pressures. Concluding with a

comparison of all policies on the meta-level and relevant policy recommendations, this book will be of interest to students, scholars and practitioners of European politics, European public policy, global governance and international relations.

The Global Food Policy Report is IFPRI's flagship publication. This year's annual report examines major food policy issues, global and regional developments, and commitments made in 2015, and presents data on key food policy indicators. The report also proposes key policy options for 2016 and beyond to achieve the Sustainable Development Goals. In 2015, the global community made major commitments on sustainable development and climate change. The global food system lies at the heart of these commitments—and we will only be able to meet the new goals if we work to transform our food system to be more inclusive, climate-smart, sustainable, efficient, nutrition- and health-driven, and business-friendly.
